FINDERS RESOURCES LIMITED

Wetar Copper Project Update-First copper plated

Finders advise that on Saturday 6th February, that copper cathode plating commenced in the electrowinning circuit at its Wetar Copper demonstration plant.

Copper Cathode

SX Plant

A subsequent minor electrical component failure in the electrowinning circuit is currently being remedied and it is expected that the plant will resume production of copper cathode in approximately 1 week and will reach nameplate capacity of 5 tpd of copper cathode by the end of February.

All other components of the operation, including the mine, crushing, stacking, irrigation and solvent extraction are operating in line with design specifications.

Chris Farmer, Managing director commented:

“We are very pleased that the demonstration plant is now complete, initial take up of copper into the leach solutions has been excellent and happy to report the start of copper plating. Other than the minor electrical issue, the commissioning process for the demonstration plant has been trouble free.”
