

Quarterly Report for the Period Ended September 30th 2010

Highlights

- ⊕ Wetar demonstration plant operating within forecast and budget.
- ⊕ Wetar mineralogical studies confirming the leaching of chalcopyrite.
- ⊕ Completion of updated analysis of capital cost estimates and planning at Wetar.
- ⊕ Purchase of long lead time items such as the Whim Creek stacker and agglomerator.
- ⊕ Encouraging drilling assays at the Ojolali gold-silver project.
- ⊕ Successful A\$20.9 million fundraising to support Stage 1 expansion of the Wetar project to 7,000 tonnes cathode per year capacity.

Wetar Copper Project - highlights

- ✓ Demonstration plant performance in line with expectations
 - 341t of Grade A cathode produced , 361t sold at an average price of \$7,227/t
 - Chalcopyrite leaching confirmed
- ✓ Stage 1 - brownfields expansion to 7,000 tpa copper
 - Estimated \$25m capital cost plus contingencies
- ✓ Stage 2 - expansion to 23,000 tpa copper
 - Detailed engineering continues; option to purchase stacker & agglomerator exercised
- ✓ Permitting progressing, final application documents completed

Ojolali Gold-Silver Project - highlights

- ✓ Tambang drill results show high grade gold and silver
 - 7m @ 5.62 g/t Au and 70 g/t Ag from 55m depth in TBGR 29
 - 13m @ 184 g/t Ag from 23m in TBGR 21 and 20m @ 128 g/t Ag from 52m in TBGR19
- ✓ Jambi gold resource update due November 2010
- ✓ Metallurgy program underway to assess milling and heap leach potential

Fundraising - highlights

- ✓ A\$20.9 million funds raised via share placement of 75 million shares
 - Tranche 1 – 28 million shares to raise \$7.86 million
 - Tranche 2 – 46 million shares to raise \$13.09 million approved by shareholders at EGM
- ✓ Shares placed at \$0.28 per share, a discount of approximately 10% to the prevailing share price
- ✓ Funds will support development of Wetar and further capital equipment purchases

For personal use only

Wetar Copper Project

(FND ~94% and earning through expenditure)

Demonstration Plant Update

The Demonstration Plant has now produced approximately 2,253 tonnes of LME grade A copper cathode since 23rd February 2009 and the last nine months have seen production at an average of 4.5 tonnes per day. Results are in line with the modelled slower leaching rates beyond the 60% Cu recovery level, as a consequence of no new ore having been stacked on Heaps 1-3 since early 2009.

Table 1: Operating Parameters

Leach Performance ⁺	Heap 1	Heap 2	Heap 3	Heap 4
Grade (Cu %)	2.5	3.6	4.9	5.0
Recovered Copper (total) – Tonnes	339	533	716	958
% Copper Recovery to date	61%	64%	76%	52%
Number of weeks under Irrigation	70	85	79	60
Electrowinning*	Q1 2010	Q2 2010	Q3 2010	YTD
Copper Produced – Tonnes	453	416	341	1,210
Copper Sold – Tonnes	361	439	361	1,161

⁺As of 16 October 2010. *As of 30 Sept 2010. All subject to final mass balances and weight reconciliations

During the quarter, a number of samples were taken from each of the heaps to determine the residual copper mineralogy in the heaps. Residual copper species in the heaps are dominated by covellite. This indicates that precursor chalcopyrite has successfully been leached during the trial phase providing encouragement for higher terminal copper recoveries than previously modelled.

Covellite appears to leach at slower rates than the other leachable copper species and cumulative leached copper from the test heaps has now reduced to approximately 25t per week commensurate with the recovery curve predictions. This trend will result in below nameplate cathode production until heaps are replenished with fresh ore material. To increase surface area and enhance leaching Heap 4 has now been restacked.

Fig 1: Chalcopyrite leaching confirmed

For personal use only

Photo shows chalcopyrite (ch) being replaced by covellite (cv)

Fig 2: Restacked Heap 4

Project Development

Stage 1 (brownfields expansion of the demonstration plant to 7,000 tpa cathode)

During the Quarter, a revised capital cost estimate for the expansion of the existing demonstration plant was completed by Neubau Pty Ltd. Compared with Feasibility Study assumptions, the current Stage 1 scope increases production capacity by 40% and includes infrastructure previously incorporated in Stage 2. The capital cost estimate is approximately US\$25 million plus contingencies and accuracy provisions:

Table 2: Capital Cost Estimate (Stage 1)	US \$ (million)
Mine Development	0.5
Process Plant Equipment and Installation	12.2
Heap Leach Pad Construction and Fittings	4.5
Utilities And Reagents	0.8
Infrastructure	0.7
Indirect including EPCM	3.9
Others including First Fills	1.7
Total before contingencies	24.3

The company is now in the final phase of selecting contractors and suppliers for the Stage 1 construction following completion of design and various tenders and site visits.

Long lead items have been identified and a selective ordering of key components has commenced such that when the Stage 1 project is committed to development these items do not impair the project delivery schedule. Orders have been placed for rectifier and harmonic protection systems plus spares with RapidPower of the USA who also provided the Demonstration Plant unit which has worked well to date. Expected delivery time to Wetar is 7- 9 months.

For personal use only

Stage 2 (Re-location of the Whim Creek plant and expansion to 23,000 tpa cathode)

Design work has continued based on installing the ex-Whim Creek plant which is currently packed in containers in Western Australia. Final documentation regarding the import of the equipment is targeted before the end of 2010, and mobilisation is expected to commence, sea conditions permitting, in Q1 2011.

Fig 3: Engineering design CAD view of re-located Whim Creek plant

Finders has exercised an option to purchase the Whim Creek 400tph mobile crushed ore to leach-pad stacker and agglomerator for A\$200,000 from Venturex Pilbara Pty Ltd, a subsidiary of Venturex Resources Ltd. The equipment was designed and supplied by Australian Conveyor Engineering Pty Ltd 4 - 5 years ago. The capacity of these units matches well with throughput requirements for the Wetar Stage 2 development. These units will be disassembled and prepared for inclusion with the shipping of the Whim Creek SXEW plant

Refurbishment, including modifying the electrics to Indonesian requirements, is necessary and discussions are in progress with an Indonesian group to oversee repairs along with other parts of the Whim Creek plant.

The Company is aiming to provide a revised capital estimate for Stage 2 in December 2010.

Permitting

Final documentation in support of the Mining Permit application is complete; issue of the permit has been slower than estimated and possibly will be delayed further until after local elections which are being held in November.

Initiatives regarding land status are being undertaken on three fronts: documentation of assets of the former mining area in support of local government rights; progressing forestry permits to utilise conversion forest areas; and the lodgement of a new spatial plan for Maluku, which pending Ministerial approval will reclassify conversion forest in the project area to open ground.

For personal use only

Background Information on the Wetar Copper Project

The Wetar Copper Project comprises two high grade deposits, Kali Kuning and Lerokis, which are located within 3km from the coast and suitable for open pit mining.

The project encompasses the old Lerokis gold mine (operated from 1989 to 1997) and benefits from having existing infrastructure in place, particularly a wharf, camp and roads and partially pre-stripped copper ore bodies.

Since February 2009, Finders has operated a 5 tonne per day SX-EW demonstration plant to test copper sulphide leach kinetics, optimise process design and provide data required for the Definitive Feasibility Study (DFS). The test heaps are at heights similar to commercial operations worldwide and the SX-EW technology being used is industry standard. SX-EW technology is currently responsible for approximately 22% of the world's copper production.

The Ore Reserves have been independently assessed by Australian Mine Design & Development Pty Ltd and are in accordance with the JORC Code (Table 1). The following statement uses a cut-off of 0.5% copper for two pits at Kali Kuning and Lerokis with an overall waste to ore ratio of 0.98.

Table 3: Wetar Ore Reserves

	Category	Tonnes (m)	Grade % Cu	Contained Copper (kt)	Contained Copper Attributable to Finders (94%) (kt)
Kali Kuning Pit	Proved	4.91	2.5	123	116
	Probable	0.85	2.2	19	18
	Sub-Total	5.76	2.5	142	133
Lerokis Pit	Proved	2.05	2.4	49	46
	Probable	0.37	2.3	9	8
	Sub-Total	2.42	2.4	58	55
Combined	Proved	6.96	2.5	172	162
	Probable	1.22	2.2	28	26
	Total	8.18	2.5	205	193

The tonnes and grades are stated to a number of significant digits reflecting the confidence of the estimate. Since each number and total is rounded individually the columns and rows in the above table may not show exact sums or weighted averages of the reported tonnes and grades.

A third deposit, Meron, is located 1.2 km from the proposed heap leach site in the Kali Kuning Valley. This prospect has a potential size of 0.5-1.5mt @ 1-3% Cu based on historical drilling results from the previous gold mining operation. This potential is an exploration target which is conceptual in nature and may or may not be converted into a Mineral Resource depending on future exploration and resource modelling work. Meron is not included in the definitive feasibility study, however engineering plans do recognize the potential for additional leach ore from Meron and additional leaching space is available.

Copper mineral species at Kali Kuning and Lerokis are dominated by chalcocite and covellite, which are readily amenable to bacterial assisted leaching, and chalcopyrite which leaches faster at higher temperatures.

For personal use only

Ojolali Project

(FND ~72% with option to increase to 100%)

Tambang Drilling

During the quarter, Finders received final assays from an 18 hole 1717m program of infill reverse circulation drilling at the Tambang gold-silver vein system. The drilling program was designed to test for near surface mineralization with potential to provide additional feed for a startup mining operation based on the Jambi oxide gold resource. Full results of this program were reported in Finders ASX release of September 9 2010.

Highlights included:

- The identification of a new high grade gold-rich shoot that is completely open at depth with an intersection of 7m grading 5.62 g/t Au and 70 g/t Ag from 55m depth within a broader intercept of 24m grading 1.84 g/t Au and 38 g/t Ag and 0.56% Zn from 49m depth in TBGR 29
- Further high grade shallow silver intersections, including:
 - 13m grading 184 g/t Ag and 0.41 g/t Au from 23m in TBGR 21,
 - 20m grading 128 g/t Ag and 0.39 g/t Au from 52m depth in TBGR19
 - 1m grading 658 g/t Ag and 0.52 g/t Au from 30m depth in TBGR 20

The program tested approximately 600m of the known +2km strike length of the Tambang vein system. The results have highlighted the continuity of wide zones of near surface gold-silver mineralization, and importantly demonstrated previously unrecognized potential for gold rich shoots within the system, as evidenced by the intersections in TBGR25 and 29, which are completely open at depth.

Jambi Resource re-estimation

A revised resource estimate for the Jambi deposit is being prepared by Hellman and Schofield Pty Ltd, incorporating the new drilling results and revised geological model. This work is expected to be completed in November.

Metallurgical Testing

A program of metallurgical testing is being implemented at Australian Minmet Metallurgical Laboratories Pty Ltd (AMML) comprising column leach test work from available drill core from the Jambi deposit, and bottle roll leach testing using RC chips from the oxidized and part oxidized zones at Tambang. Previous cyanide leach tests for Jambi oxide mineralization have indicated +90% recoveries for gold, but no previous leach test-work has been carried out on the silver rich oxide material from Tambang.

The test work will review the potential to cyanide leach these ore types considering both milling and heap leach options. The program will take about three months to complete, and will form the basis for a scoping study into the development of a start-up gold-silver mining operation, based on the Jambi and Tambang oxide resources.

Ongoing Surface Exploration

Geological mapping and trench sampling continues targeting additional near surface oxide resources, supported by structural and stratigraphic mapping to target deeper targets for future drilling.

For personal use only

Background Information

Finders believes that the Ojolali project has strong potential to be a follow-on project for Finders based on the development of the gold resource at the Jambi Oxide deposit and/or the Tambang Prospect.

Table 4. Jambi Mineral Resource Estimates											
Cut off Au g/t	Indicated			Inferred			Total			Contained Au koz	Attrib. FND (72%) Au koz
	Mt	Au g/t	Ag g/t	Mt	Au g/t	Ag g/t	Mt	Au g/t	Ag g/t		
0.5	2.98	1.1	8.3	1.1	0.9	5.7	4.08	1.05	7.6	138	99
1.0	1.13	1.74	8.5	0.3	1.6	6.7	1.43	1.71	8.1	79	57

Finders has previously announced Inferred Resources at the Tambang Prospect (7.9 Mt @ 167g/t Ag and 0.7 g/t Au at a 1 g/t Au equivalent cut-off using drilling data from a previous explorer).

Previous exploration by Finders, using both soil geochemistry and geophysics has located numerous targets within a 10 x 4km mineral district which have potential to provide additional resources.

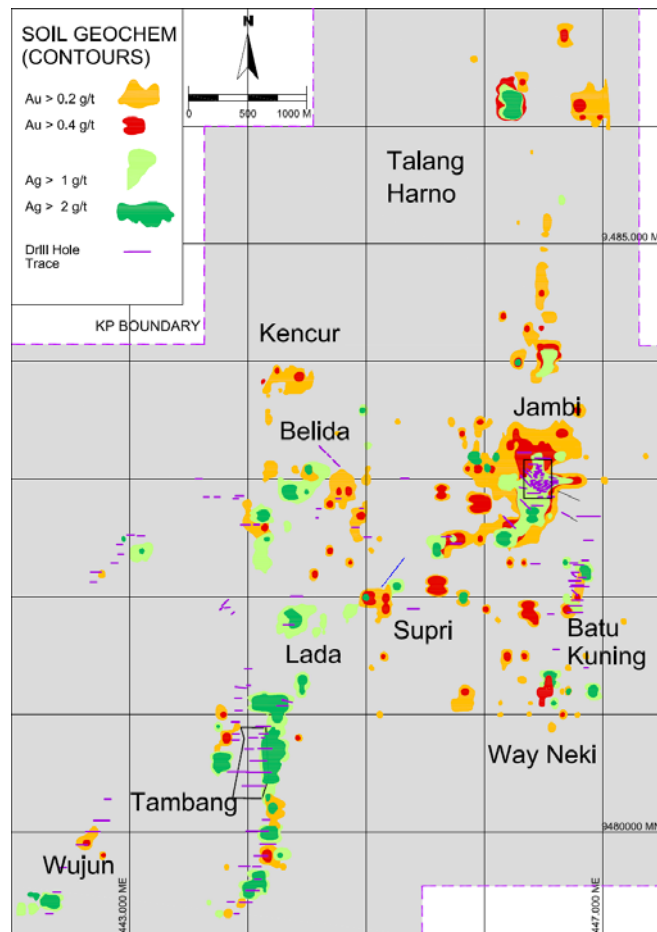

Figure 4: Ojolali district: soil geochemistry and prospect locations

Finders' current exploration strategy at Ojolali is to increase the oxide gold-silver resource base to +300,000 Oz gold equivalent (Au eq), to provide the basis for a low cost 30-50,000 Oz Au eq per year open pit mine based on the Jambi and Tambang oxide deposits.

	(A\$2,323,972)	A\$0.36	19 January 2012

Following shareholders' approval at an extraordinary general meeting held on 6 October 2010, the Company issued a further 45,138,287 shares at \$0.28 per share (Tranche 2 of share placement) to raise A\$12.6 million before issue expenses.

As at 30 September 2010, Finders had A\$7.2 million in cash. The mining exploration entity quarterly report (Appendix 5B) is appended. Subsequent to 30 September 2010, the Company raised A\$12.6 million pursuant to Tranche 2 of the share placement referred to above.

Competent Person Statements

The information in this report that relates to exploration potential, mineral resource and ore reserve estimation is the responsibility of Dr Russell Fountain. Dr Fountain is a Director of Finders and a Fellow of the Australian Institute of Geoscientists. Dr Fountain has sufficient experience that is relevant to the styles of mineralisation and types of deposits under consideration and to the activity that he is undertaking to qualify as Competent Person in the 2004 Edition of the 'Australasian Code for Reporting of Exploration Results, Mineral Resources and Ore Reserves' (JORC Code) and as a Qualified Person as defined in the AIM Rules. He consents to the inclusion in this report of the matters based on his information in the form and context in which they appear. All assaying of drill core samples was undertaken by the ITS laboratory in Jakarta. ITS is one of the world's largest product and commodity testing, inspection and certification organizations. The Jakarta laboratory is ISO 17025 accredited and employs a Laboratory Information Management System (LIMS) for sample tracking, quality control and reporting.

Disclaimer

This announcement may or may not contain certain "forward-looking statements". All statements, other than statements of historical fact, which address activities, events or developments that Finders believes, expects or anticipates will or may occur in the future, are forward-looking statements. Forward-looking statements are often, but not always, identified by the use of words such as "seek", "anticipate", "believe", "plan", "estimate", "targeting", "expect", and "intend" and statements that an event or result "may", "will", "can", "should", "could", or "might" occur or be achieved and other similar expressions. These forward-looking statements, including those with respect to permitting and development timetables, mineral grades, metallurgical recoveries, potential production reflect the current internal projections, expectations or beliefs of Finders based on information currently available to Finders. Statements in this document that are forward-looking and involve numerous risks and uncertainties that could cause actual results to differ materially from expected results are based on the Company's current beliefs and assumptions regarding a large number of factors affecting its business. Actual results may differ materially from expected results. There can be no assurance that (i) the Company has correctly measured or identified all of the factors affecting its business or the extent of their likely impact, (ii) the publicly available information with respect to these factors on which the Company's analysis is based is complete or accurate, (iii) the Company's analysis is correct or (iv) the Company's strategy, which is based in part on this analysis, will be successful. Finders expressly disclaims any obligation to update or revise any such forward-looking statements

No Representation, Warranty or Liability

Whilst it is provided in good faith, no representation or warranty is made by Finders or any of its advisers, agents or employees as to the accuracy, completeness, currency or reasonableness of the information in this Announcement or provided in connection with it, including the accuracy or attainability of any Forward Looking Statements set out in this Announcement.

Finders does not accept any responsibility to inform you of any matter arising or coming to Finders' notice after the date of this Announcement which may affect any matter referred to in this Announcement. Any liability of Finders, its advisers, agents and employees to you or to any other person or entity arising out of this Announcement including pursuant to common law, the Corporations Act 2001 and the Trade Practices Act 1974 or any other applicable law is, to the maximum extent permitted by law, expressly disclaimed and excluded.

Distribution Restrictions

The distribution of this Announcement may be restricted by law in certain jurisdictions. Recipients and any other persons who come into possession of this Announcement must inform themselves about, and observe any such restrictions.

Notes

- 1 The quarterly report provides a basis for informing the market how the entity's activities have been financed for the past quarter and the effect on its cash position. An entity wanting to disclose additional information is encouraged to do so, in a note or notes attached to this report.
- 2 The "Nature of interest" (items 6.1 and 6.2) includes options in respect of interests in mining tenements acquired, exercised or lapsed during the reporting period. If the entity is involved in a joint venture agreement and there are conditions precedent which will change its percentage interest in a mining tenement, it should disclose the change of percentage interest and conditions precedent in the list required for items 6.1 and 6.2.
- 3 **Issued and quoted securities** The issue price and amount paid up is not required in items 7.1 and 7.3 for fully paid securities.
- 4 The definitions in, and provisions of, *AASB 1022: Accounting for Extractive Industries* and *AASB 1026: Statement of Cash Flows* apply to this report.
- 5 **Accounting Standards** ASX will accept, for example, the use of International Accounting Standards for foreign entities. If the standards used do not address a topic, the Australian standard on that topic (if any) must be complied with.
