## WETAR PIT WALL FAILURE

Finders Resources Ltd (ASX: FND) (“**Finders**” or “the **Company**”) advises of a wall failure within the Kali Kuning open pit at the Company’s Wetar Copper Project.

Approximately 175,000 BCM’s of waste rock from the north-eastern highwall was displaced into the Kali Kuning pit during the evening of 14 June, with mining operations suspended for approximately 6 hours the following day to allow for a geotechnical assessment.

The footprint of the slip has temporarily isolated approximately 40,000 BCM’s of ore, however the majority of the ore body was not affected by the failure and mining continues in the central and southern zones as planned. At this stage, there is no anticipated disruption to scheduled ore production and a recovery plan for rehabilitating the failure zone and accessing the affected ore is underway.

It is expected that the recovery plan can be executed using the current mining fleet, with a further update to be provided over coming weeks when the revised mining schedule is finalised.
